

FOUNDING COHORT STARTS JULY 2026 — ENROLLING NOW

The kids who understand AI will build the future.

A hands-on AI camp where kids don't watch videos about technology — they use real AI: drawing for an AI that actually sees, training mini-models, and building things they're proud of.

A real hour, every week

Small-group, hands-on sessions at the public library, mentors in the room.

A platform kids love

12 game-like missions at home, badges, characters, and real AI inside.

Designed with a child psychologist

Pacing, confidence, and safety built for ages 8-11.

Safe by design

No kid emails, filtered chat, small cohorts where every child gets seen.

Scan to see the platform and reserve a spot.

Meet the missions, the characters, and the camp — and save your child's seat in the founding cohort.
